

► If I like it, what I need ?

For adopt this technology is necessary to buy at least one device from an authorized dealer. Where you want to place the device is necessary an internet cable connection (also WiFi).

If not, you can also buy a device with 3/4G adapter (in this case you need an internet phone carrier connection sold separately).

The connection of SZS will be very simple and anyone with a minimal technical competence can in few minutes connect and run the SZS device. Otherwise we offer a complete technical service before and after sale, can help you in any steps and also can, with professional staff do the installation for you, where you want.

All will be provided with best competence and with clear and cheaper cost.

Feel free to contact us, without any charge by you, and we let you to discover all opportunities offered by this revolutionary technology for improve your life.

We will happy to satisfy any your desire and let you to reach ubiquity.

Share Zero Space and SZS is a trademark covered by world wide patent by Project Studio. All right reserved.

Fabrication Laboratory e Innovazione

Project Studio challenge innovations and discover new solutions in the technology fields. His team is owner of many patents in different fields, such as; Internet of things, logistic, info mobility and component for environmental applications.

All is possible by the Project Studio fabrication lab. A complete laboratory with all technology and hardware an software instrumentations for create, play and enjoy.

NEW IDEAS FOR A NEW WORLD

How would be cool if we could control any events in the real world in the easiest, simplest and safety way.

And how it would be even cool if we could share immediatly this control opportunity with whoever we want, when we want and for how long we desire, immediatly and without complications.

From now this oportuntiy exist, Project Studio has invended and patented for you. His name is

Share Zero Space

► Technology we really need

Each of us, in his everyday work, realizes that technology is not always we need to improve our quality of life, indeed very often it becomes the cause for anxiety and complication.

In fact today you can have different normally called "Home automation control systems." They are neither simple nor cheap, and very often do not apply to existing plants. Even more is complicated and usually very expensive to manage such facilities and events that they control remotely. So, often the event that you want to control had a unsustainable cost and a system complication for many.

Is for this reason that we thought to a whole new approach to the control of the events around us. Each event you want to check, whether the opening of a gate or a garage, ignition of lights, irrigation control in the garden, the control of heating system from now will become as simple as any natural gesture.

► What is Share Zero Space

Quite simply Share Zero Space is a new dimension represented by a new technology based on cloud and internet that allows everyone to be able to have control over every desired event.

Thanks to an unique and simple field device, which must be connected to the events to be monitored, without changes to existing installations, you can for example check and command; the opening of a gate or a garage, the lights, the irrigation control in the garden, the ignition of a heating system etc. This will make it possible to turn these events localized in events that become controllable from our personal account in Share Zero Space portal. As well as a key attached to a key ring, each event becomes manageable simply by accessing our world size keychain (the cloud), in a secure way independently from specific app, using any device that can access the Internet.

If for example the event that you want to control was the opening and closing of a passage now controlled locally by means of key access, remote control, badge card, simply by coupling one ShareZeroSpace device to the opening and closing command will be immediately possible to handle such passage , remotely from anywhere in the globe through the cloud.

So no hassle, no-cost infrastructure, but simply a Share Space Zero basic and cheap device, a network connection to the Internet and you're done.

Just recorded your device in the cloud portal it is ready to operate from your account at yours orders and from any place on earth.

Each device is able to control and manage many events, and each user can have an indefinite number of devices in his account.

► Share Zero Space is Social

The opportunity offered by the Share Zero Space technology does not stop to individual but thinks also social.

With the same simplicity, you could, if you wish, to share that control with family members, if necessary with friends, and if utility, for example with the gardener, allowing that he can, through their mobile device (smartphone), his account and password (with all the guarantees of security credentials), to open the gate, thus avoiding to provide any key or remote control, with the certainty that its action, will be known by the owner of the event because it will be notified in real time when the action is in progress by the cloud. Of course with the same easeness and at any time this authorization may be revoked, without the burden of necessity to return from shared user any key or access devices(remote control device).

Then share the desired event control is extremely simple. Simply the owner just decide what to share with a single click, then enter the user's name or user to which you want to grant or delegate the desired event control and everything is done. Instantly in their keychain (Zone) they find themselves a copy of the key to handle the event shared with them. No configuration, no installation of app and nothing more to do. It's also possible to send an email in multiple languages, which informs our friend who is now possible for him to manage the shared event.

Share Zero Space is also thought to the user community and for installations for monitoring of public events, such as for example access to car parks, in areas with restricted by authorized user traffic, law enforcement, etc.

It 'also available a feature called easy access based on the QR Code.

Finally, if you want you can have a personalized portal Share Zero Space and private, that can easily be installed even in a local customer-owned network, with reasonable costs.
